(54) Title: A METHOD FOR CONTROL OF PARKED VEHICLES

(57) Abstract: The present invention relates to a method of controlling a parked vehicle in which a mobile telephone can be used to commence and to terminate parking of a vehicle, wherein a user sends at least one user specific code to a receiving computer (3) belonging to the parking system via a mobile telephone system or via a fixed telephone system when beginning and terminating a parking period, wherein at the beginning of a parking period the identity of the parking zone concerned is sent to the parking system in which a vehicle specific code is stored in said computer (3) and tied to the user specific code, and wherein a control unit is used for wireless communication with said computer to fetch information as to the identity of those vehicles that have commenced but not yet terminated a parking period in the zone concerned, i.e. are still logged into the system. The invention is characterised in that the control unit

includes a mobile telephone (1) that sends to a receiving telephone device (2) coupled to said computer (3) a voice message from said parking attendant which includes a vehicle registration number, wherein the computer (3) compares this registration number with the registration numbers of logged-in vehicles; and wherein the computer (3) is caused to send to the mobile telephone (1) a voice message in which the registration number understood by the computer (3) is repeated in the mobile telephone (1) and which includes information as to whether the vehicle is logged-in or not.
